

Grip Tape Dispenser

Instructions For Loading Tape

Operating Instructions

STEP 1

Place the roll of tape on the back spool with the tape unrolling from the bottom, adhesive side up.

STEP 2

Pull the tape and liner over the spool nearest the cutting blade. Separate and place the tape on the blade and insert the liner into the slot on the bottom spool. Turn the knurled knob on the bottom spool clockwise until it is tight.

STEP 3

The tape is now ready to dispense.

STEP 4

Adjust the tension on the back spool to allow the tape to come off easier or harder depending on your preference.

IMPORTANT: The liner spool will not rewind unless tension knob is completely tight.

The double sided grip tape dispenser accepts tape up to 2" in width. It makes handling grip tape simple and hassle free by removing the paper liner and winding it into a spool as you use the tape.
