

## HF-100 Grip Solvent

**HF-100 Grip Solvent** is economical to use. You will use less than other solvents. We recommend the use of a spray bottle to apply **HF-100**.

Apply grip tape to cover the full length of the grip and 1/4" over the butt end of the shaft. Remove the paper carrier. Fold excess tape into the butt end of the shaft.

### Operating Instructions

#### STEP 1

Spray **HF-100** Onto the grip tape, 1 pump on each side of the shaft.

#### STEP 2

Spray **HF-100** inside the grip, 1 pump is sufficient.

#### STEP 3

Install the grip by pushing onto the shaft.

#### STEP 4

Wipe off the excess **HF-100** with a dry cloth. If you have applied the correct amount of solvent, the excess should be minimal.

#### STEP 5

The grip should be set in 15-20 minutes.

**NOTE:** If you use too much **HF-100**, it can take up to 60 minutes to dry.
